

LOGISTICS OVERSIGHT

DISCRETE INSIGHTS FOR LOGISTICS

Powered by advanced machine intelligence, CargoSense Logistics Oversight delivers supply chain professionals a discrete view of their product as it follows through a shipping lane. Understand exactly when cargo was moved between the various shipping methods, how long it spent within each method, and how it was handled throughout.

Obtain a visually-segmented shipment report that depicts key events such as truck trips, warehousing, tarmac and flight durations, along with associated environmental excursions such as temperature thresholds exceeded or shock limits that occurred during each specific shipping segment.

Avoid manually sifting through various documents and data files, or contacting your transportation partners for additional information to reconstruct a shipping timeline. Let CargoSense provide you with a detailed shipment segmentation report for all of your supply chain activities.
