

GET THE ULTIMATE TEMPERATURE **OVERSIGHT** FOR DATA LOGGER FILES

Our Cloud-based Temperature Oversight service allows pharmaceutical logistics teams to upload, store, access, visualize, analyze, and share your temperature logger files. We have integrated the top data logger providers in the world into a single software platform. We can easily integrate new sensors due to our open API platform, which provides the ultimate in flexibility for logistics professionals to choose from a variety of sensor and logger providers.

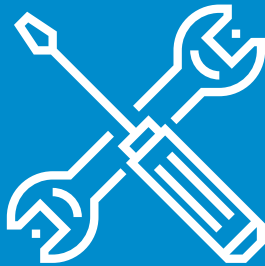

Customers can also annotate their temperature logger files with items such as lane information, flight data, customer data, and more.

HOW IT WORKS

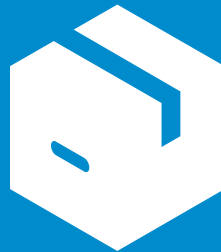

Our robust visualization of temperature graphing is simple to use

Choose any approved logger we have integrated, or tell us what logger you need us to integrate into our platform*

Configure your shipment in our system, with one or more loggers and additional shipment info (airway bill, etc).

Ship your cargo with the loggers affixed and then upload the logger files via an automated email or our web-based platform.

View your temperature graphs online by sensor, lane, or alarm status.

CargoSense Temperature oversight can also be extended easily to leverage our two other offerings – Logistics Oversight and Lane Analysis Reports

** Requires API integration or similar data translation ability*
